

THE BELL AIRACOBRA _____ *"Cannon on Wings"*

Foresight

The Bell Airacobra single engine fighter is an outstanding achievement in foresight. From the first day of design its purpose has been to provide heavy cannon fire in the nose, speed and exceptional maneuverability. Another major feature is the greater safety in landing and take-off that's assured by the retractable tricycle landing gear. As the Bell Airacobra delivers its advantages to Britain's air forces, it also holds promise of the pioneering part Bell Aircraft will play in the coming years of peace.
