

The Biggest Single!

PC XII

How big is big?

The PC-12 single turboprop is bigger than you think. In fact, it's bigger than many twins. Apart from that, the PC-12's high performance, comfortable pressurized cabin, single engine price tag and operating costs combine to give exceptional value.

- And that's the big idea!

An example: the PC-12's direct operating cost on a 600 nm trip is around 40% less than that for a typical twin. For more information, please call Pilatus Aircraft Ltd (Switzerland) Tel: + 41 41 636 290. Fax + 41 41 636 224
