

One of our key services is not on the bill: the number of your flying hours.

**Let's talk about solutions:
+49/40/5070 5553**

You can always tell whether an engine overhaul was worth the money by the date of your next shop visit. With Lufthansa Technik, you'll generally find you need an appointment much later than you've been used to. Take Boeing 747s, for example: CF6-80 C2 engines take wing for almost 14,000 hours before coming to rest with us for their next shop visit. Thanks to our engineering and airline experience, we keep your engines flying high for as many hours as possible. After all, one thing's for sure: your EGT margin tells you more about engine overhaul efficiency than the size of your bill. Just call or fax.
