

Rolls-Royce

31,000 HOURS ON THE WING AND THAT'S ONLY THE TIP OF THE ICEBERG

A Rolls-Royce RB211-535E4 installed on an Icelandair Boeing 757, has recently cruised into the world record books with a continuous run time of 31,000 hours since aircraft delivery in 1991 . . . and is showing no signs of stopping. But that's only

the tip of the iceberg. The 535 engine fleet is setting the pace for reliability with operators all over the world.

The record breaking achievement with Icelandair is not only testimony to the 535E4's durability, and its reputation as the most reliable large

turbofan in service today. It is also a notable tribute to the quality of the Icelandair technical staff and pilots.

In the air and on the ground, the record shows that Icelandair in partnership with Rolls-Royce is truly on top of the world.
