

SWALLOW

- the safest aeroplane in the world!

Photo by courtesy of "Flight."

Off in a few yards. Eight hundred feet up in sixty seconds! Almost automatic stability. Can't be "spun." Under full control—lateral and fore-and-aft at speeds below the "stall." Floating in to land at 25 m.p.h. and stopping dead in forty yards or so.

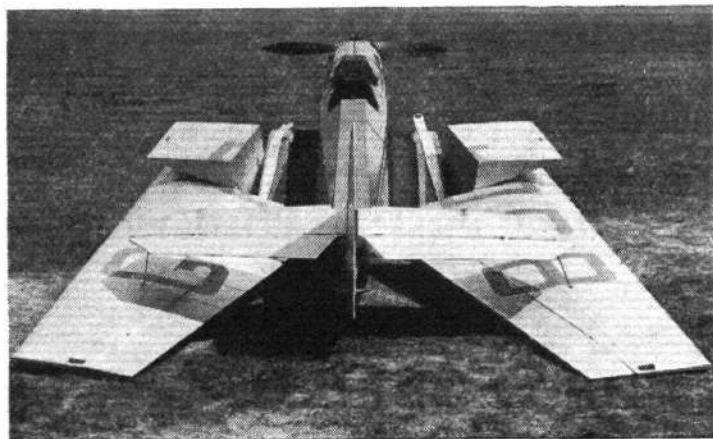

Photo by courtesy of the "Aeroplane."

Flying ceased to be a hazardous sport and became the normal way for ordinary folk to travel — thanks to the "Swallow." The only "fool-proof" aeroplane that has an impressive and remarkable performance. The "Swallow" makes the air safer than the crowded roads.
