The New Year Honours

CIVIL-LIST AWARDS IN AVIATION

IN the New Year Honours List, made public last weekend, several prominent figures in the aircraft-equipment field receive knighthoods; and two technical directors, one of an aircraft firm and the other of an engine manufacturer, are appointed CBE. Two well-known test pilots are also named in the list.

The names given on this page are selected from the civil branches of the various Orders; Service honours and awards are given in detail on page 36 of this issue.

CRANFIELD CHANGES

THREE departments of the College of Aeronautics, Cranfield, are being re-named. The Department of Aircraft Economics and Production becomes Production and Industrial Administration; Aircraft Electrical Engineering becomes Electrical and Control Engineering; and the Department of Aircraft Materials the Department of Materials. These changes are being introduced progressively during the current academic year, so that they become established by the beginning of next session, in October this year.

As part of its diversification of activities since 1959, the College

now offers advanced courses (in addition to the two-year specialist courses for aeronautical engineers) in the re-named departments, as follows: *Production and Industrial Administration*: economics and production, precision engineering, production technology, operational research and ergonomics; *Electrical and Control Engineering*: industrial control engineering and flight control; *Materials*: the physics and mechanics of structural materials, and welding technology. The departments also provide specialist instruction for students doing space technology and guided-missiles courses.
