

Free Flight is the way airlines  
have always wanted to fly.

Collins AVSAT™ is the way  
they'll soon be able to do it.

Imagine a better way.

One that frees you to go your own way. Choosing your own optimum routes, speeds and flight levels. IFR-direct to any destination. Saving billions of dollars in airline operating costs each year.

That's the vision of Free Flight: a satellite-based approach to air traffic management that promises to revolutionize the future of commercial flight as we know it.

As you'd expect, Collins Commercial Avionics is taking a leadership role. With data radio systems – from HF to satellite – providing growth for ATN data link capabilities. With advanced flight management systems and 5-inch liquid crystal displays to upgrade

classic cockpits. And with in-depth resources to develop integrated solutions for your entire fleet. Using Collins AVSAT avionics, you'll move toward this new world of Free Flight the way airlines have always wanted to fly: In a straight line.
