

# - Airship for the Future.

## Experienced Engineers in the Systems Area

Job Code CD SYS

All systems for the support or interaction with the environment are developed in the Division Systems. That includes energy distribution systems in the form of Fuel, Electricity and Hydraulics, Air Conditioning, internal and external Communication, the areas Navigation as well as Flight Control (hardware integration). These developments are carried out in a close co-operation with other departments of the CargoLifter Development GmbH and renowned national and foreign project partners as well as national and international licensing authorities.

As a Design Engineer you will be responsible for drawing up the respective development and test documentation (i.e. the keel, the envelope, wings, propulsion etc.) in your special area for the realisation and you are responsible for the further inspections of the documents.

You will be best qualified for a position with:

- A degree in Aerospace Engineering or related fields.
- Extensive knowledge in the JAA and FAA regulations (mostly part 25)
- Good knowledge of aviation laws.
- Minimum of 1 year experience as a development or system engineer in aviation in your special area.
- Fluent spoken and written English.
- Knowledge of the relevant materials as well as inspection and testing procedures specific for this industry.
- Ability to work in team.
- Analytical abilities for the assessment of system contexts.

The CargoLifter Group	The CargoLifter Locations
