Like some two-thirds of their colleagues, Swissair pilots A330 Captain Peter Guillod and B747 First Officer Brigitte Girardin earned multiengine and instrument ratings at FlightSafety Academy. The academy has a 20-year record of success in assisting major carriers — such as Swissair, Air China, and Saudi Arabian Airlines — with ab initio training.

Routing your ab initio cadets through the FlightSafety Academy in Vero Beach, Florida, is a proven way to cultivate pilots from the ground up. Give us your bright young new hires with little or no flying experience and we'll take them as high as you want them to go — from primary training, to all the qualifications for a commercial license and multiengine and instrument ratings, to jet transition training, to the status of a career-ready pilot.

Devoted exclusively to training for future professionals, the Academy provides modern facilities — including flight simulators and a training fleet of over 90 singles and twins — on Florida’s sunny East Coast, where the weather permits year-round training progress. And where the U.S. cost-of-living structure creates significant savings over the cost of European-based training programs.

Major carriers — such as Swissair, Finnair, Air China, South Korea’s Asiana, Saudi Arabian Airlines and others — have relied on FlightSafety Academy as a widely respected source of airline training. It’s a program that always means success, in any language.
