

ERJ 135

ERJ 145

Harmony.

Working together to reach a *higher* standard.

The features that make the ERJ 145 and ERJ 135 different from their competition are the same features that passengers and operators say matter the most to them. Advantages like state-of-the-art designs with more than 95% of the aircraft components common to one another.

The ERJ 145 and ERJ 135 were designed from the start to excel as regional jets.

Engineered from the beginning with operational simplicity in mind, each jet represents the optimal balance between performance and operating costs—providing maximum dispatch reliability and fleet integration.

Passenger ergonomics were also heavily factored into their design. Wider aisles, more sidewall clearance and larger, better positioned cabin windows are just a few of the things that have made them the top pick in independent industry surveys, time after time.

The choice is clear. The smartest solution is the one that carries with it the best economic, operational and aesthetic advantages. You'll find it in the ERJ 145 and ERJ 135.
