

**WHEN WE'RE AROUND, EVERYONE SLEEPS BETTER.**

An off-airport footprint of a Super 27 takeoff at London Gatwick airport is 92% smaller than the equivalent footprint of a Stage II 727-200. (Stage III, B727 Super 27, MTOW 195,500 lbs., 85 dBA Lmax contours).

**QUIETER TAKEOFFS. MORE PERFORMANCE.  
THEY MUST BE SUPER 27s.**

Add Super 27 modification kits to your fleet and you'll own the quietest 727-200s in the world – fully 36% quieter in noise-affected community areas.

But the best reasons to re-engineer your 727-200s are strictly business: You'll carry up to 20,000 lbs. more payload per plane than you carry now. Or fly up to 1,200 NM farther, for more non-stops, fewer flight cycles, lower operating costs. And a razor-sharp competitive edge.

So put the Super 27 in your neighborhood and rest easy. Call today to learn more about the Super 27 program. 888.764.7727 or 619.691.6628.
