

# The answer to all those ear-splitting demands: quieter engines

The requirements placed on modern aircraft engines are high: they have to be quiet, economical, environment- and maintenance friendly. And that is where MTU have made their biggest hit: with their Engine 3E Program – Efficiency, Economy, Environment. The secret to that success? – Innovative design and production technologies! In the HDV 12, for example, we have developed a civil compressor that is far more efficient than competing products. Such advances by MTU in the key technologies of aero-engine design have produced great reductions in not only fuel consumption but also atmospheric and noise pollution. An unheard (of) success!
